

## ABSTRACT

[00331] The image pickup apparatus of the present invention is for taking a static image during a predetermined exposure period. The image pickup apparatus includes: a shaking motion detecting section for detecting an amount of shaking motion between a plurality of frames representing the static image; a shaking motion correcting section for correcting a plurality of frame information indicating the plurality of frames in accordance with the detected amount of the shaking motion; a storage section for storing the plurality of frame information subjected, to the correction of the shaking motion; and an information generating section for generating static image information indicating the static image based on the plurality of frame information stored in the storage section.
